

Replacing Touch with Speech as Primary Man-Machine Interface

The TAM-TAOT Alliance designs & delivers hardware and software platforms that replace traditional touch-based interfaces using customized language & acoustic models combined with advanced audio hardware. The result is an integrated voice & hardware solution that provides superior performance in challenging noise environments in the commercial, industrial and government markets.

Your One-stop Solution to Solve Tough Development Challenges

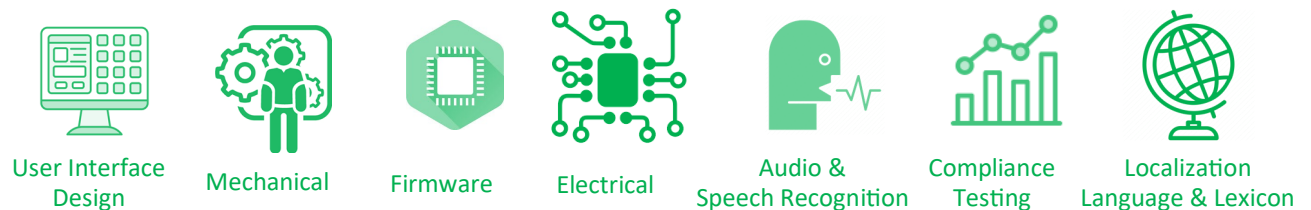

WE DEFINE

The increasing complexity of operational challenges in today's swiftly evolving technology environment require more than just one-size-fits-all solutions. TAM and TAOT work closely with your teams to identify and prioritize the use-case needs of your organization and collaborate to distill a core list of needs and requirements that meet and exceed your business demands.

WE DESIGN

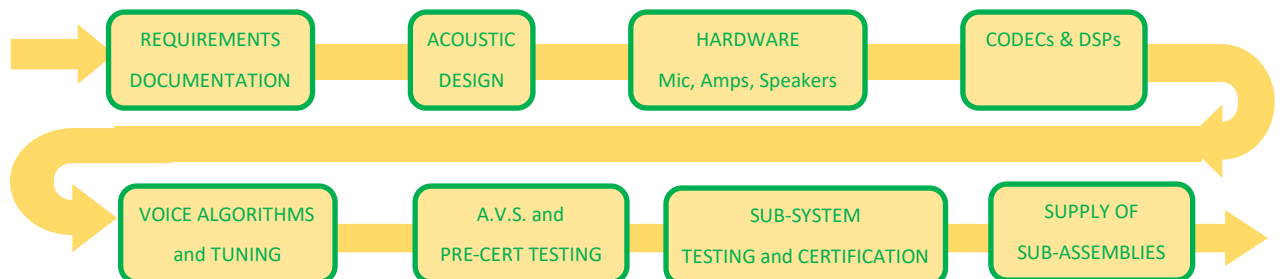

TAM and TAOT conduct a detailed evaluation of your organization's specific use cases and respective challenges, and apply our expertise in Acoustic System Design, Mechanical Integration, Custom Speech Recognition development to create a comprehensive proposal that meets all of the objectives outlined during the definition phase.

Our ENGINEERING SERVICES

WE DEVELOP

Product and Solution Development follow a gated process with checkpoints along the way to ensure that your requirements remain fully in focus. Acknowledging that requirements in the rapidly evolving market can change during development, TAOT & TAM are able to react and assure that the end solution meets both current and anticipated needs down the road.

WE DELIVER

The TAM-TAOT alliance delivers your integrated solution in a turnkey, scalable manner that enables seamless integration into your existing and future product offerings.
